U.S. Representative [Louie Gohmert \(R-TX\) addressed Congress](#) on July 15th to report the Natural Resources Committee's passage of HR 3534, the Consolidated Land, Energy and Aquatic Resources Act (CLEAR Act) of 2009. Congressman Gohmert said that the bill was to "deal with the disaster in the Gulf of Mexico" but it contains plans for the federal government to acquire land and was introduced in 2009.

WHO OWNS THE WEST? Federal Land as a Percentage of Total State Land Area

Data source: U.S. General Services Administration, *Federal Real Property Profile 2004*, excludes trust properties.

The CLEAR Act is ambiguous so if the bill is passed, federal agencies will determine how it is implemented and how the land will be used.(1)

Congressman Gohmert pointed out that a portion of the CLEAR Act contains a provision for the federal government to spend \$900 million a year to purchase private land over the next 30 years, for a grand total of \$27 billion dollars over 3 decades. Gohmert noted that the federal government already owns or manages about 30% of the land in America, most of it in the western states. He said that the federal government has failed to maintain the federal and national parks that it already controls and is \$3.7 billion behind in basic maintenance costs, according to one report. When land is federalized, it is taken off of the tax payroll.

He went on to say that when the federal government acquires land, it makes promises to generate revenue but then fails to utilize the resources; an example is timber, as logging is prohibited in most federal lands. Mr. Gohmert then showed a graph of how much money the federal government has spent to acquire more land over the last few years:

2008	\$100 million
2009	\$150 million
2010	\$300 million

Gohmert was incredulous that the federal government intends to raise its purchasing allocations to \$900 million a year for the next 30 years and questioned "how in the world does that make sense"?

It makes perfect sense when the objectives of the UN's Agenda 21 are understood, as Agenda 21 is the overarching blueprint for depopulation and total control from the international level all the way down to the individual level, using the environment as the excuse. Most people are unaware that one of Agenda 21 Sustainable Development's goals is to make 50% of America into 'Wildlands' that are off-limits to humans and to herd people into 'Smart Growth' cities. Almost all wealth is derived from land and its resources. The more land the federal government owns, the more control they have. Less than 6% of America is considered developed (with roads and buildings) but the federal government is devoted to reducing these developed areas.(2)

The federal government has expanded its expense account to purchase more private land following the burst of the housing and real estate bubble that they created, and at a time when property is cheap. When Bill Clinton was in the White House he authorized a study called the Gap Analysis which identified all privately owned land in America and this is the target for takeover by the federal government and UN Biosphere Reserves, per Dr. Michael Coffman.

The Constitution provides for the federal government to exercise authority over ten square miles in Washington, D.C. and places for needful buildings like forts, arsenals and dock yards. Nowhere does the Constitution give the federal government authority to regulate conservationism, forestry and wildlife.

Watch this short video introduction about the Wildlands Project by Dr. Michael Coffman:

Wayne Hage, author of "Storm Over Rangelands, Private Rights in Federal Lands" meticulously documented how the eastern financiers (bankers, railroad magnates and wealthy cattle ranchers), over 100 years ago, used federal lands in the western states to control resources that include minerals, timber and hydroelectric sites. In modern times, oil may also be included. There is an abundance of natural resources in the western states, but the resources are locked up, through conservation measures to prevent prosperity. And to prevent energy independence.

Congressman Gohmert said that the Obama Administration doesn't like to lease land for drilling and gave an example of Ken Salazar, Secretary of the Department of Interior, rejecting bids and returning checks to oil companies for drilling in Utah, Wyoming and Colorado, which could have prevented the need for deep water drilling. He also said that uranium mining is off-limits in America and that 90% of uranium used in nuclear energy plants is imported. Gohmert mentioned that Obama is advocating Spain's 'green' energy model for wind and solar development that has proven to be an economic disaster.(3)

The CLEAR Act's funding for private property purchase by the federal government is just one part of the machinery that is overtaking America's private land. An example of another federal land grab method was in the news just a few months ago when Senator Jim DeMint exposed Obama's plan to takeover 10 million acres of land in the west.(4) Because the western states' federal lands are already heavily regulated and there are existing plans for federalizing more land through 'conservationism', it is likely that the federal government intends to purchase private land that is resource rich (especially with oil, gas and water) in the midwestern and eastern states. Dr. Michael Coffman's thorough analysis, "Taking Liberty", is a must-see for anyone who owns property, especially the region-by-region section that explains how the federal government plans to take land in each area of the U.S. in order to control the resources and transform the property into Wildlands.(5)
